

RESPONSIVE BASICS

MEDIA QUERIES

```
@media screen and (max-width: 600px) {  
  section {  
    margin: 0 auto;  
  }  
  footer li {  
    width: 100%;  
  }  
}
```

STEPS TO ACHIEVE MULTI-COLUMN LAYOUT:

- ☐ Make sure each column has wrapper around it in your HTML
- ☐ Give the columns wrapper (the flex container)
- ☐ Add display:flex to flex container
- ☐ Give each column width in percentages
- ☐ Use justify-content on flex container to determine how columns are distributed.

DISPLAY:

inline	<i>Make block-level element act like inline element.</i>	display: inline;
inline-block	<i>Make block-level element flow like inline element, while retaining width, height, padding, and margin.</i>	display: inline-block;
block	<i>Make inline element act like block-level element</i>	display: block;
none	<i>Hide element from the page.</i>	display: none;

FLEX CONTAINER PROPERTIES

display	flex
flex-wrap	wrap, nowrap
justify-content	<i>flex-start, flex-end, center, space-between, space-around</i>
